Introduction

It is possible to upgrade directly from C5 4.0 SP1 to Microsoft Dynamics C5 2008 SP1 Hot fix 011 or to upgrade from Microsoft Dynamics C5 2008 directly to Microsoft Dynamics C5 2008 SP1 Hot fix 011, so it is no longer a prerequisite to have Service Pack 1 installed.

The only prerequisite is that the files from SP1 including the kernels are copied to the correct folders as described in the installation guide for Microsoft Dynamics C5 2008 SP1. The SP1 Hot fix 011 Syp file is accumulative and contains the changed objects in the Syp-layer since 2008 was released.

The installation guide for Hot fix 011 therefore has to explain different situations:

1. Update from Microsoft Dynamics C5 2008 SP1 Hot fix 1-10 to Microsoft Dynamics C5 2008 SP1 Hot fix 011
2. Update from Microsoft Dynamics C5 2008 Hot fix 1-7 to Microsoft Dynamics C5 2008 SP1 Hot fix 011
3. Upgrade from Microsoft C5 4.0 SP1 to Microsoft Dynamics C5 2008 SP1 Hot fix 011

Determine which version of C5 is installed.

Go to General, Table, System status, Customization status – button Service Packs/Hot fixes.

Case 1 - Verify that either: Version 4.2.1.x is installed. (x = any number)

Case 2 - Verify that either: Version 4.2.0.x is installed. (x = any number)

Case 3 – Verify that Microsoft 4.0 SP1 is installed

Case 1.

Follow the instructions described below in section "Installation of Hot fix 011 – Case 1".

Case 2.

Copy the files for Service Pack 1, following the instructions for Service Pack 1 until the section "Start Microsoft Dynamics C5 2008" copy also the files for SP1 Hot fix 011 to the program data folder.

Afterwards follow the instructions for Service Pack 1 from the section "Start Microsoft Dynamics C5 2008".

Case 3.

Install Microsoft Dynamics C5 2008 as described in the installation guide.

Copy the files for Service Pack 1, following the instructions for Service Pack 1 until the section "Start Microsoft Dynamics C5 2008" and copy also the files for SP1 Hot fix 011 to the program data folder. Afterwards follow the instructions in the "Oversættelses kit" document.

In each case you will be asked as soon as the compilation has finished if you want to update the company to version 4.2.1.011.

Note - Be aware of that beginning with this hot fix the version numbering format has changed to <Mainnumber 1pos>.<subnumber 1pos>.<Service pack number 2pos>.<Hotfix number 3pos>, e.g. 4.2.01.011

Installation of Hot fix 011 – case 1

This installation guide describes how to update Microsoft Dynamics C5 2008 Service Pack 1 with Hot fix 011.

The Hot fix is released as zip-files without installation program. The update is done by unpacking the zip files and copying the files to the Microsoft Dynamics C5 folder and overwriting existing files.

Contents of Hot fix 011

The Hot fix is shipped as 2 sets of files – one for each database type:

- C5_2008SP1_HF011_Native.zip for Native database
- C5_2008SP1_HF011_SQL.zip for SQL database

For both C5_2008SP1_HF011_Native.zip and C5_2008SP1_HF011_Sql.zip, following files are present:

C5sysald.dk

C5sysald.is

C5sysald.uk

C5txtdat.dk (same as for Hot fix 8)

C5txtdat.is (same as for Hot fix 8)

C5txtdat.uk (same as for Hot fix 8)

Exp4201011.sys

c5util.syp

Payroll:

Lonopd.zip

Documentation:

Installation Guide C5 2008 SP1_HF011.pdf

Fix list C5_2008SP1_HF011.pdf

Payroll - Ferie_2011

Momsloven_01012010.pdf (no change - the same document as from Hot fix 5)

Oversættelses kit.pdf (no change - the same document as from Hot fix 3)

Before starting the installation

To ensure an easy and secure installation following steps have to be done

Make full back up of the installation!

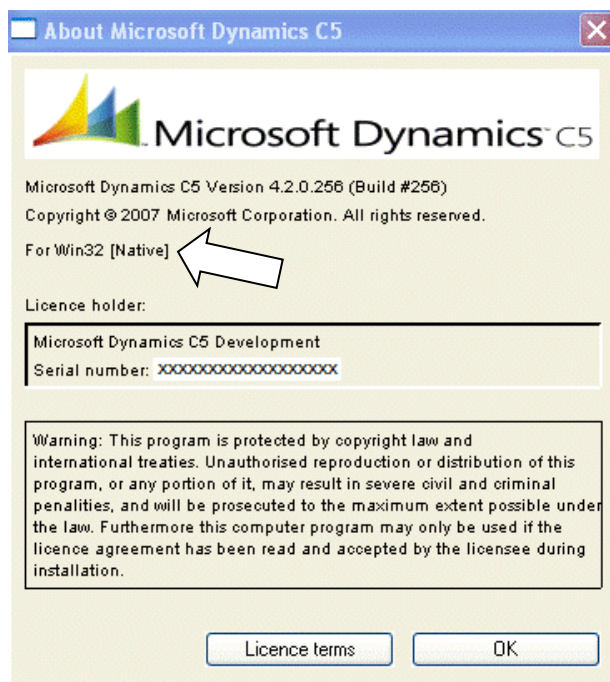

It is important to make a back up of the entire existing Microsoft Dynamics C5 installation before the update is started. The update requires that existing files are overwritten; it will not be possible to restore the original files after the update.

Investigate if there is used Native or SQL installation.

If it is uncertain whether the original installation was Microsoft Dynamics C5 2008 Native or SQL and thereby which zip file that should be unpacked C5_2008SP1_HF011_Native.zip or C5_2008SP1_HF011_SQL.zip to perform the upgrade, this can be checked like follows:

1. Start current Microsoft Dynamics® C5 2008.
2. Click menu bar on top and select "Help\About Microsoft Dynamics® C5" (In console version this can be found by pressing ALT+A)

Just above the field "License holder/Licenshaver" it is written whether the current installation is a Native or SQL installation.

In the example above, a Native kernel is used.

If Native kernel is used the following should be used:

C5_2008SP1_HF011_Native.zip

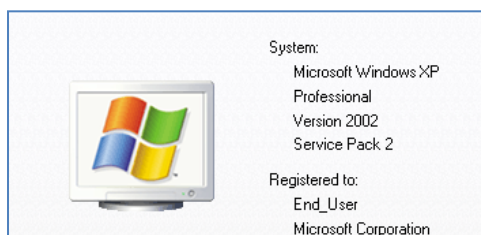

If SQL kernel is used the following should be used:

C5_2008SP1_HF011_SQL.zip

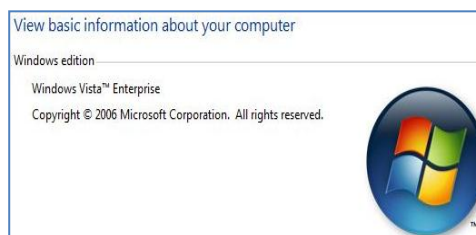

Investigate which operating system is used.

During the installation, the folder structure is defined depending on whether Microsoft Dynamics C5 is installed on Windows XP or Windows Vista/ Windows 7, it is important that it is known which operating system that is used:

- Click Start or start icon (lower left corner)
- Choose Control panel
- Choose System

Windows® XP™

Windows® Vista™ or Windows 7

Installation of Hot fix 011 on Windows XP

Copy the file C5_2008SP1_HF011_Native.zip/C5_2008SP1_HF011_SQL.zip to a temporary folder and unpack the files. Unpack the files with YES to use folder names.

The description below shows where the installation has to be made if the default folder structure was chosen during the installation of Microsoft Dynamics C5. If the installation folder was changed during the installation, you have to find this folder.

The starting point for the description below is an English version of Windows® XP™, hence folder structure and naming.

1. Copy/overwrite the contents of the unzipped folder named "Native" or "SQL" (depending on what you use) to :

C:\Documents and Settings\All Users\Application Data\Microsoft Dynamics C5 2008 Data

A warning will appear telling that you are about to overwrite existing files. Confirm "Yes to all" to overwrite all files with the same names.

You can now delete the temporary folder where you unzipped the files and you are ready to go to the section "Start Microsoft Dynamics C5 2008".

2. In case the label files C5sysald.dk, C5sysald.is and C5sysald.uk or C5txtdat.dk, C5txtdat.is, C5txtdat.uk are copied, index files to label files have to be deleted manually – it concerns: C5txtdx.dk, C5sysali.dk, C5sysalc.dk, C5modalt.dk (Danish label files)

C5txtidx.uk, C5sysali.uk, C5sysalc.uk, C5modalt.uk (English label files)

C5txtidx.is, C5sysali.is, C5sysalc.is, C5modalt.is (Icelandic label files)

This will ensure a correct use of the label files. The deleted files will be re-created automatically during the first start up of Microsoft Dynamics C5 2008.

Installation of Hot fix 011 on Windows Vista or Windows 7

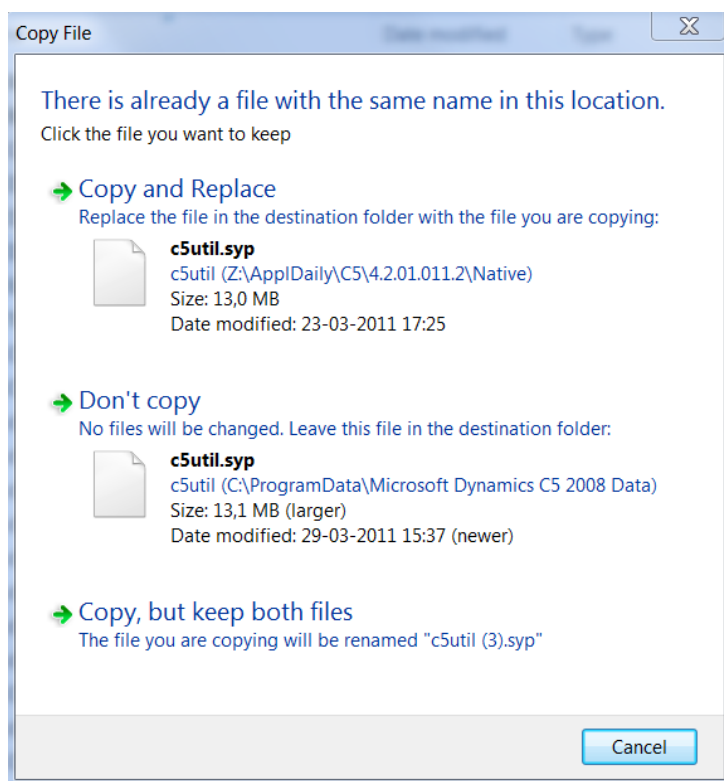

Copy the file C5_2008SP1_HF011_Native.zip/C5_2008SP1_HF011_SQL.zip to a temporary folder and unpack the files. Unpack the files with YES to use folder names.

The description below shows where the installation has to be made if the default folder structure was chosen during the installation of Microsoft Dynamics C5. If the installation folder was changed during the installation, you have to find this folder.

The starting point for the description below is an English version of Windows® Vista™, or Windows 7 hence folder structure and naming.

3. Copy/replace the contents of the unzipped folder named "Native" or "SQL" (depending on what you use) to :

C:\ProgramData\Microsoft Dynamics C5 2008 Data

You can now delete the temporary folder where you unzipped the files and you are ready to go to the section "Start Microsoft Dynamics C5 2008".

4. In case the label files C5sysald.dk, C5sysald.is and C5sysald.uk or C5txtdat.dk, C5txtdat.is, C5txtdat.uk are copied, index files to label files have to be deleted manually – it concerns:
C5txtidx.dk, C5sysali.dk, C5sysalc.dk, C5modalt.dk (Danish label files)
C5txtidx.uk, C5sysali.uk, C5sysalc.uk, C5modalt.uk (English label files)
C5txtidx.is, C5sysali.is, C5sysalc.is, C5modalt.is (Icelandic label files)

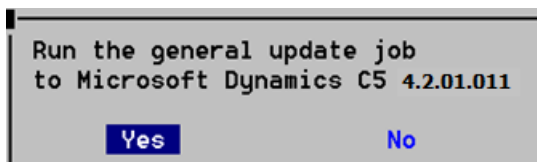

This will ensure a correct use of the label files. The deleted files will be re-created automatically during the first start up of Microsoft Dynamics C5 2008.

Start Microsoft Dynamics C5 2008

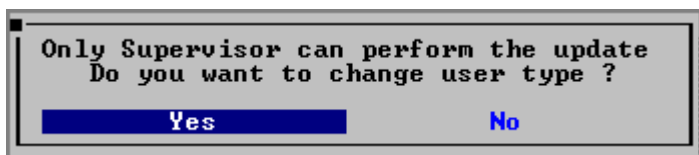

To ensure correct update of Microsoft Dynamics C5 2008 start the console version.

Go to Start\Programs\Microsoft Dynamics C5\Administration\Development Consol IS/DK/UK

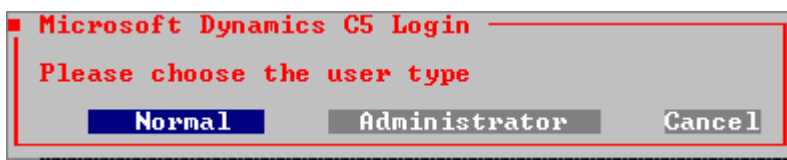

A dialog appears asking for permission to update to version 4.2.01.011 – enter "Yes"

If you have not started as "Supervisor" you will get the opportunity to change:

Enter Yes (Ja)

Change to "Administrator" enter

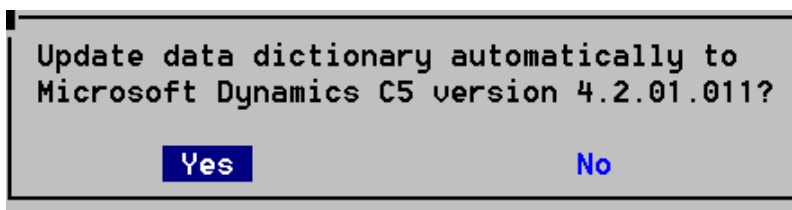

Enter OK

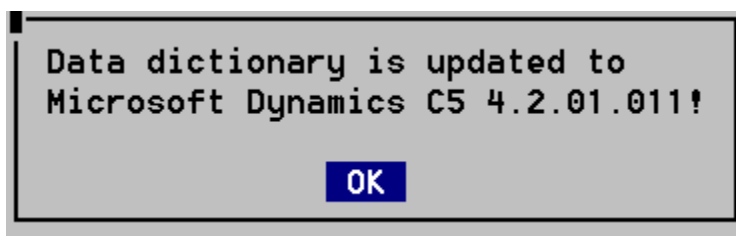

OBS - Then a new dialog appears because there are changes to the data dictionary due to changes to the EU sales list reporting (Listesystem) this was introduced in hot fix 5, so if hot fix 5 already was installed the next 3 dialogs will **not** appear when installing Hot fix 011.

Enter "Yes"

Then it starts to update the database.

Click OK

Afterwards Microsoft Dynamics C5 2008 automatically will recommend a compilation of the application.

Compile application:

| | Incl. | Excl. | From | To |
|-------------------------|--------------------------------|-------|------|----|
| Database..... | .* | | | |
| Trigger..... | .* | | | |
| Xal..... | .* | | | |
| Query..... | .* | | | |
| Form..... | .* | | | |
| Report..... | .* | | | |
| User scripts..... | .* | | | |
| Functions..... | .* | | | |
| DBD triggers..... | .* | | | |
| c5util..... | All | | | |
| Errors in log file only | Yes | | | |
| Show log..... | No | | | |
| Cleanup per each.. | 10 | | | |
| Debug info..... | No | | | |
| Log file..... | Compile4201011.log | | | |
| Comment..... | Vers. 4.2.1.349 04/04-11 10:04 | | | |

Ins #

1. If the column "Incl." is not filled out, you have to mark it manually as shown in the picture above. Press "F3" to start the compilation.

As soon as the compilation has finished you will be asked if you want to update the company to version 4.2.01.011.

Update the data set (company) DAT to version 4.2.01.011

Yes No

Just enter "Yes" and you are running Microsoft Dynamics C5 version 4.2.01.011.

If you are using several companies, you will have to update each company separately. By changing the company (General/Daily/Change data set (company)) you will be asked to update the data set to version 4.2.1.10.

To ensure that the correct Hot fix is installed go to – General, Table, System status, Customization configuration and verify following:

Application version: 4.2.01.011

Build 4.2.1.011.2

Information

For information about new features implemented in Service pack 1 we refer to the documentation included in Service pack 1. The documentation can be found in the documentation folder for Service Pack 1.

New kernels, later than the one included in Service pack 1 (build 349), has been released separately. Latest released kernel build – build no 4.2.1.371 – can be found:

<https://mbs.microsoft.com/partnersource/downloads/hotfixes/microsoftdynamicsc5421371kernel.htm?printpage=false>

Payroll

For payroll updates please see the document

Ferie_2011

DBD automerger

OBS - When you update C5 versions where payroll tables are set to "Only in DAT file" the tables are set to "In each datafile" after the DBDautomerger has run.
